

EUROPEAN MASTER OF SCIENCE IN OCCUPATIONAL THERAPY

Master, part-time

2025-2026

This master aims to further develop your scientific competences and research skills as an occupational therapist. It offers a vibrant learning community with multi-national and multi-lingual faculty and students who possess a wealth of experiences in education, research and practice.

TRULY INTERNATIONAL

As a graduate, you have the international perspective and evidence-based approach that will help solve problems in health and social care systems and undertake quality improvement and research projects to enhance practice.

The European Master of Science in Occupational Therapy offers you contemporary and innovative education at five participating universities. During the first year, you travel to attend classes in Brighton (England), Amsterdam (The Netherlands), Winterthur (Switzerland), and A Coruña (Spain). Each trip lasts two weeks. The second year will bring you to Stockholm (Sweden) for one week and you will finalize your degree within the comfort of your own home country

Lea Feller
Alumna OT-Euromaster

I decided to participate in the OT-Euromaster because of my interest in research in occupational therapy. I did not only gain a deeper understanding of how research is conducted but also how to apply its findings in my daily practice as occupational therapist. And being part of an international study cohort provokes a feeling of connectedness around the world through our shared profession.

FACTS & FIGURES

EUROPEAN MASTER OF SCIENCE IN OCCUPATIONAL THERAPY
